PROJECT DESCRIPTION:

Objectives

Nowadays, it is not easier to find any sector of human activity where modern tools of Information and Communication Technologies (ICT) are used. Public Administration Bodies are not excepted from such a list.

It is known that for the development of any state and country the Public Officials play an important role. In the Republic of Tajikistan for becoming Public Officials students study at the Institute of Public Administration under the President of the Republic of Tajikistan (IPA) in Bachelor and Master programmes. Also Public Officials periodically take part in short-term training courses for improving their professional skills. Such courses, usually, organized on the base of Agency for Public Administration by the teaching staff of IPA.

In the modern World, the Public Officials like all other employee in different industries, must have the appropriate competences related to usage of computers, office equipment and required software. Unfortunately, in this direction there are some issues associated with insufficient practical skills of Public Officials in the Republic of Tajikistan.

The Public Officials while they were students at IPA and during their participation on aforementioned short-term trainings study some classes related to ICT, but unfortunately the content of such classes does not meet modern requirements for ICT training, all the more when the competent approach of training is to be taken into consideration.

The relevance of the project idea lies in the fact that there is no any study module "Information and Communication Technologies for Public Officials" has been created before. That is why, **development of appropriate study module "ICT for Public Officials"** for its implementation in corresponding short-terms training courses (as a Long Life Learning approach), as well as for its implementation at IPA as separate course would be key points of the proposed project. As the outcomes of project the following items in hard and/or soft copies (printed and/or electronic versions) are expected: (a) syllabus; (b) textbook/tutorial; (c) complex of control and measuring materials; (d) distance-learning course; (e) etc.

For realization of aforementioned goals and objectives the National Testing Center under the President of the Republic of Tajikistan (NTC) jointly with the Institute of Public Administration under the President of the Republic of Tajikistan came to the conclusion and stated the fact that it is needed to establish an international cooperation. And, preparing an appropriate project proposal for its submission in the Erasmus+ 2019 call is in due time.

We are looking for higher educational institutions/universities, research institutions, educational and training centers, etc. from EU for being as a project coordinator (applicant) and to collaborate on preparing project proposal in the mentioned area. Any other relevant information will be provided more in detail upon request via Skype conversations or any other communication tools.

NTC is open for any constructive suggestions, advices and recommendations that will be highly appreciated.
